

Get the Most Out of Your Rat Snap Trap!

How to effectively bait your Rat Snap Trap:

Place the attractant in the dedicated cup as shown by either removing the bait cup or placing directly into the bait cup.

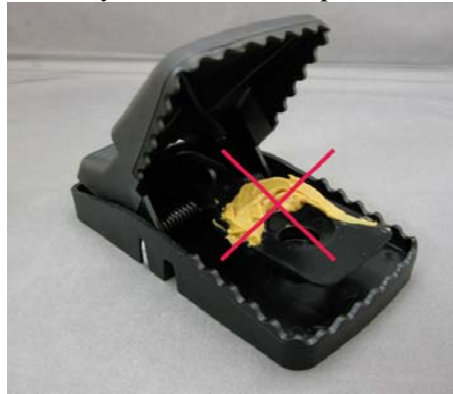

One small dose is enough to attract rats. Rats are particularly attracted by scent, be sure enough attractant is placed properly in the bait cup but do not over bait the trap. Place the traps every 5 to 7 meters.

How to ensure the longevity of your reusable Rat Snap Trap:

- Place attractant only into the bait cup and not on other portions of the trap.
- Do NOT place attractant directly on the trigger mechanism, base, hinge or other portions of the trap as some oily attractants, lubricants, and solvents will eat away and weaken the plastic.
